Dear Hiring Team,

I am excited to apply for the Automation & AI Internship at Henkel. I have been building practical AI and automation solutions that solve real business problems for 3 years, and I am eager to apply those skills in an environment where I can learn from experienced professionals while contributing meaningful work.

In a system I've built, I identified and implemented an automation that results in a 30% revenue increase while eliminating over 40 hrs of manual work every month. Experiences like this have reinforced my interest in understanding business processes, uncovering inefficiencies, and building solutions that deliver tangible results.

Over the past 3 years, I have focused on building end-to-end automation systems rather than isolated technical projects. Through my freelance work, I have developed AI-powered business solutions including a personalized voice AI recruitment assistant, automated outreach systems that combine data preprocessing, enrichment, scraping, AI-powered personalization, and email delivery, and a 6- tier cloud-based ERP and automated payroll engine currently running in production.

Beyond implementation, I have worked directly with clients to identify opportunities where automation could create measurable business value.

My technical background includes Python for automation and data processing, SQL, API integrations, and working with modern AI models and agentic workflows. I also have experience preparing and validating data, building automation pipelines, and breaking down business processes to identify opportunities for optimization. While I am always looking to deepen my knowledge in tools such as Power BI and Microsoft Fabric, I enjoy learning new technologies quickly and applying them to real-world challenges.

What particularly attracts me to Henkel is the opportunity to work on automation initiatives that create measurable impact across the organization. I enjoy collaborating with stakeholders, understanding how processes work, and building solutions that eliminate repetitive tasks and allow teams to focus on higher-value work. I am experienced in communicating with non-technical users, documenting solutions, and supporting adoption through training and clear documentation.

I would welcome the opportunity to contribute my technical skills, curiosity, and problem-solving mindset while continuing to grow within Henkel's digital transformation initiatives. Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to your team.

Sincerely,
Ziad Marsafawy
